

## Special Operating Conditions

### Hints for Driving

The most important rule for slippery or icy roads is to drive sensibly and to avoid abrupt acceleration, braking and steering action. Do not use the cruise control system under such conditions.

When the vehicle is in danger of skidding, move selector lever to position "N". Try to keep the vehicle under control by means of corrective steering action.

Provided the traffic conditions will allow, only brake in a way that the wheels are locked for no more than fractions of a second as otherwise the steerability of the vehicle is lost.

Road salts and chemicals can adversely affect braking efficiency.

Increased pedal force may become necessary to produce the normal brake effect. We therefore recommend depressing the brake pedal repeatedly when traveling on salt-strewn roads at length. This can bring road salt impaired braking efficiency back to normal. A prerequisite is, however, that this is possible without endangering other drivers on the road.

If the vehicle is parked after being driven on salt treated roads, the braking efficiency should be tested as soon as possible after driving is resumed while adhering to the safety requirements.

### High Altitude Correction Device

The engine is equipped with an automatic high altitude correction device.

### Tire Chains

Use only tire chains that are tested and recommended by us. Any authorized MERCEDES-BENZ dealer will be glad to advise you on this subject.

Chains should only be used on the rear wheels. Adhere to the manufacturer's mounting instructions.

After driving a short distance retighten the mounted chains.

Tire chains should only be driven on snow at speeds not to exceed 50 km/h/30 mph. Remove chains as soon as possible when driving on roads without snow.

### Traveling Abroad

Abroad, there is a widely-spread MERCEDES-BENZ service network at your disposal. If you travel into areas which are not listed in the index of your dealer directory, you should request pertinent information from your dealer.
